

Math Rocks in the Middle - Applying Common Core

Students are finishing up proportions and percents in Mrs. Jackson's Algebra class. In the picture, students are using proportions to solve how big real life objects would be if their height

was shrunk to only 12 inches tall and all of the objects were shrunk proportionately.

Students also use their skills with a spin on the Price Is Right game *Now or Then* to find percent change in store bought items. Students work in small groups and pairs using teaming skills, sharing information and problem-

solving together. This environment emulates real work situations and real world problems. Who says Math can't be fun!!! This is engaging!
